

Volume 6: Sponsor Campaign Studio, Templates & Telemetry

Technical specification for co-branded sponsor releases, multi-lane approval pipelines, dynamic [Sponsor] 31 in-game branding, template registries, charity cause tracking, and privacy-safe telemetry ingestion.

Target Stack: NestJS 11 · Prisma 6 · Redis · S3 Storage · BullMQ · **Lead:** Muhammad Sameer Ali

VOLUME OBJECTIVE:

Specifies the complete enterprise co-branding studio. Details working drafts, multi-lane brand/safety approvals, asset upload pipeline, dynamic [Sponsor] 31 branding resolution, 1-click template deployer (Nike 31, Adidas 31, MooMorrow), charity cause tracking, and sponsor analytics.

1. Campaign Release Control & Versioning Model

- **Revision Counter:** Drafts are versioned with integer `revision`. Modifying a locked version automatically increments `revision` and creates a new `DRAFT` row.
- **Multi-Lane Approval:** Independent approvals required for `BRAND` and `SAFETY` lanes before a version can be published.
- **Emergency Controls:** 1-click rollback to historical version; `isPaused` toggle (reverts to classic look); `isCausePaused` toggle (freezes charity donations).

2. Dynamic [Sponsor] 31 In-Game Branding Engine

The backend serves the active manifest via `GET /promo-tournaments/:id/campaign/active`. The frontend isolates the sponsor card from the 3D '31' shield badge: if Nike sponsors → `[NIKE] [31]`; if Adidas sponsors → `[ADIDAS] [31]`. The arena HUD bottom dock and mobile modals display `\${sponsor} 31`.

3. Campaign Templates & 1-Click Deployment Engine

Template Preset	Theme & Visual Styling	Charity Cause & Target Goal
Nike 31	Volt accent (#ccff00), Swoosh typography, dark obsidian arena.	\$50,000 USD for <i>Global Youth Athletic Alliance</i> (youth gear).
Adidas 31	Performance cyan (#38bdf8), 3-Stripes branding.	€35,000 EUR for <i>Ocean Play Preservation Trust</i> (turf pitches).
MooMorrow 31	Pasture green & gold (#8cff65), Barnaby cow animations.	\$25,000 USD for <i>Green Meadow Farmers Trust</i> (dairy farming).
Cyber Neon 31	Cyberpunk cyan/magenta (#67e8f9), high-voltage grid.	50,000 USDT for <i>NextGen Coder Initiative</i> (school laptops).

4. Telemetry Batch Ingestion & Proof-of-Performance

- **Ingestion:** `POST /promo-tournaments/:id/campaign/events` receives 10s batched impressions, dwell seconds, cause expands, and CTA clicks.
- **Aggregation:** Redis buffer flushes to `TournamentCampaignEventAggregate` table.
- **CSV Export:** `GET /.../report/csv` streams verifiable spreadsheet for sponsor billing.
